## DETAILED ACTION

### *Drawings*

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "power supply", "actuating means", and "fuel supply" must be shown or the features canceled from the claims. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102/ § 103***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claims 1-16 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Hempel (5,887,388), which discloses, among other things, fireplace, television, and book cabinetry including

substantially all of the claimed limitations. Hempel discloses an entertainment and fireplace assembly located entirely within the outer walls of the home comprising a non-vented gas fireplace 12 positioned against the inside of an outer wall, cabinetry 14 including a fireplace cabinet 16 and one or more general cabinets 18,20 positioned against the inside of one or more outer walls, wherein the general cabinets include a corner cabinet (see at least fig. 1), and wherein the general cabinets include a bookcase cabinet 20. Hempel does not specifically recite that the gas supply and power supply are operably connected to the fireplace, or an actuating means associated with the fireplace and the cabinetry. Nevertheless, it would be readily apparent, if not inherent, to one of ordinary skill in the art that a gas fireplace should include a gas supply, a power supply (as most modern gas fireplaces include electrical power for at least creating a spark to ignite the gas), and an actuation means for both (at least to turn it on and off, if not for control and safety devices). Accordingly, it would have at least been obvious, if not inherent, to one of ordinary skill in the art at the time of the invention to incorporate the gas supply, power supply, and respective actuation means into the invention disclosed by Hempel, so as to provide for a working gas fireplace.

### ***Prior Art***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Rumens patent application publications include many of the claimed limitations, but were not applied to avoid overburdening applicant with redundant rejections.
